## 1. Project Overview

**Tianyuan Coin (QEB)** aims to build a transparent, equitable, and charity-oriented decentralized financial ecosystem.

The project introduces an innovative **Smart Circuit Breaker Mechanism**, which dynamically regulates price and liquidity stability by monitoring real-time liquidity thresholds on the BNB Chain.

Unlike traditional tokens that rely on high taxation or centralized management, QEB maintains a **zero-transaction-fee policy**, enables **instant global transfers**, and adheres to the principle of full decentralization — with **philanthropy as its core driving force**. As a multi-zero token, QEB symbolizes **equality in value distribution**, ensuring that ordinary users and major holders participate on equal terms and share in the collective growth of the ecosystem.

## 2. Circuit-Breaking Mechanism & Logic

The **Smart Circuit Breaker Mechanism** is based on liquidity thresholds that follow a power-of-two progression: **8 → 16 → 32 → 64 → 128 → 256 → 512**, extending infinitely without upper limits.

When the liquidity pool reaches these thresholds, the system automatically triggers a **protective protocol** that temporarily restricts large-scale sell orders to prevent severe price volatility or market manipulation.

As liquidity stabilizes within higher ranges, trading resumes automatically, forming a **self-sustaining cycle of growth and equilibrium**.

This mechanism establishes a solid foundation for **QEB's long-term value accumulation and sustainable expansion**, endowing the ecosystem with intrinsic resilience against large-scale sell-offs and speculative shocks.

### 3. Tianyuan Philosophy and Spirit

“Tianyuan” symbolizes **wholeness, origin, and balance** — a concept derived from the mythological and philosophical traditions of the East.

QEB draws inspiration from **Taoist principles of dynamic harmony**, where movement and stillness, strength and softness coexist in cyclical equilibrium.

Each liquidity threshold resembles the rhythm of breath — **circuit breaks represent balance and recalibration, while upward momentum signifies renewal and transcendence.**

This **philosophical framework rooted in Eastern wisdom** mirrors QEB’s technological logic with universal human values, crystallizing the intrinsic meanings of **fairness, sustainability, and rebirth** within the decentralized order.

## 4. Community Cohesion

The **QEB community** is founded upon **consensus, transparency, and a shared vision**, symbolizing the unity and self-discipline born from decentralized belief.

Its growth is driven by **voluntary participation** rather than external incentives.

Community members actively engage in **token staking, liquidity building, governance, and content creation**, collectively shaping the organic strength of the QEB ecosystem.

Through open communication and collective creativity, **QEB becomes more than just a cryptocurrency — it evolves into a movement grounded in trust, altruism, and shared consensus.**

## 5. Tokenomics

**-Total Supply:** 210 P QEB (1 P =  $10^{15}$ )

**-Top 1 Holder (Multisignature Custody Wallet Address):** 168.00 P ( $\approx 80\%$ ) — Custodied by the United Nations Charitable Foundation, allocated to a global charity fund pool and excluded from market circulation.

**-Top 2 Holder (Burn Address):** 30.00P ( $\approx 14.29\%$ ) — Permanently burned and irreversibly removed from the circulating supply.

**-Circulating Supply:** Approximately 12.00P ( $\approx 5.71\%$ )

**-Transaction Fee:** 0% — Users only pay the BNB Chain Gas fee.

**-Settlement Speed:** Powered by the BNB Chain's global settlement infrastructure, achieving near-instant confirmation and real-time finality.

## 6. Roadmap

### Phase I — Incubation and Consensus

Establish a global community consensus, decentralize token distribution, and form a fully decentralized holding structure.

This phase lays the foundation for a stable and equitable ecosystem.

### Phase II — Charity and Capital

The Multisignature Wallet Address with the Largest Token Holdings (168.00 P QEB) is now under the custody of the United Nations Charitable Foundation, The QEB project team has innovatively adopted a blockchain multi-signature custody mechanism, forming a secure and transparent global charity fund pool.

This initiative integrates the transparency of blockchain with real-world philanthropy, ensuring that QEB remains true to its founding principles of equality and charity.

During this phase, QEB will collaborate with the United Nations Charitable Foundation and local philanthropic organizations to launch charity initiatives and attract global capital inflows.

### Phase III — Mainstream Adoption and Payments

Develop a **zero-fee, instant-settlement global payment network**, advancing QEB toward mainstream cryptocurrency status.

In its final stage, QEB will evolve into a **widely used, value-stable, decentralized ecosystem**, ultimately becoming one of the leading cryptocurrencies recognized for its **fairness, transparency, and inclusiveness**.

This represents QEB's long-term mission — **to become a symbol of equality, integrity, and hope in the blockchain era.**

## 7. Core Strengths

### **-Zero-Fee Transactions:**

Stimulates market vitality through a zero-transaction-fee model, promoting free trading and greater financial inclusiveness.

### **-Smart Circuit Breaker:**

Prevents sharp price drops and suppresses manipulative sell-offs through liquidity threshold mechanisms, fostering a resilient and stable market environment.

### **-Fair Structure:**

The multi-zero token design ensures equality and inclusiveness, allowing every participant to co-build and share within the same decentralized order.

### **-Instant Settlement:**

Leveraging the high-performance infrastructure of the BNB Chain to enable global, near-instant transfers and real-time settlement experiences.

### **-Charitable Orientation:**

The largest holding address is securely custodied by the United Nations Charitable Foundation, establishing a long-term foundation of trust and philanthropy.

### **-Community Consensus:**

A decentralized, community-driven governance model sustained by collective consensus, ensuring long-term growth and enduring prosperity of the ecosystem.

## 8. Team & Founders

**Satoshi Nakamoto** — Founder

Visionary pioneer behind the decentralized value system that inspired QEB.

**ZF** — Co-Founder of QEB

Founder of the ABBAS2F consensus framework and chief architect of QEB's Smart CircuitBreaker mechanism.

**Zhao Changpeng** — Co-Founder of QEB

Concept architect of the Tianyuan Coin ABBAS2F system and executive overseer of QEB's economic-chain governance.

**Antonio Guterres** — Co-Founder of QEB

Tianyuan Coin World Charity Promotion and Popularization, multi-signature address Manager of the United Nations Fund Pool.

## 9. Technical Information

### -Blockchain:

Issued and operated on the **BNB Smart Chain (BEP-20)**, providing high performance and broad interoperability.

-**Contract Address:** 0x33d33a42926f5b5fe4a88fd29ff1b3dbd37d8888

-**Liquidity Pair:** QEB / BNB

### -Transaction Fee:

0% (users only pay the BNB Gas fee for network settlement).

### -Major Token Distribution:

1. **The United Nations Charity Foundation's Multisignature Custody Wallet** — 168.00 P (Charity Fund Custody)
2. **Burn Address (Black Hole)** — 30.00P (Permanently burned, excluded from circulation)
